

# From residential to commercial, Lake Fountains & Aeration Inc. manufactures floating fountains to fit all needs

## Lake Fountains and Aeration, Inc.

Headquartered in Sanford, Florida, Lake Fountains and Aeration, Inc. is one of the largest manufacturers of high quality and reliable floating fountains for lakes and ponds. Lake Fountains originated as a division of a water management company in 1979. It was incorporated as an individual company in 1992, by owner Gayl Williams. Our success is attributable to several main characteristics. These include the ability of our staff to design a fountain uniquely suited

to our client's needs, our friendly and knowledgeable customer service representatives, very high quality and reliable products and unequalled follow-up service. These fountains utilize submersible water pumps rather than propellers, resulting in a much greater availability of spray patterns and spray heights. Our fountains typically range in horsepower from 1/3 to 40 hp and a variety of spray

heights of 3' to 60' or more. The 120 volt lighting packages include a variety of lens colors and wattages. Our high quality control panels are matched exactly to the pump and lighting system. Other options include wind controls, deluxe power control centers and lighting packages. We ship anywhere in the United States and our packages are easy to install.
